

## Mining and mineral-processing equipment Mills and screens

### Production history

The traditional types of serial products manufactured by NKMZ include ore and coal grinding mills, as well as cement mills. A wide range of equipment makes it possible to successfully cooperate with miners in many countries of the world. It should be noted that these mills meet the technical level and operational requirements for machinery of this class of the world's leading manufacturing companies.

In recent years, NKMZ has been mastering a new grinding technology. This project involves designing and industrial implementation of resource-saving forced autogenous grinding mills (MBV).

To disperse coke in the metallurgical industry, NKMZ produces disk two-stand mobile screens.
